Re: (Your name)
(Your owner number)
(Opt. Legal description)

Attention: Royalty Owner Relations Department

It is my understanding the Kansas Corporation Commission (KCC) has authorized the optional use of vacuum compression in the Hugoton and Panoma-Council Grove fields in Southwest Kansas. It is my further understanding any operator making an application to install and use a vacuum pump for gas production from a well located in either of those fields is required by the KCC to give notice to any operator or lessee of record within a mile radius of the well. However, no notice is required to be given to the affected royalty owners.

My rights as a royalty owner will necessarily be affected by vacuum operations on wells in which I have an interest or on wells in the immediate vicinity of lands in which I have a mineral interest. Because of the prospect of enhanced production through vacuum compression, as a royalty owner I have a right and need to know what steps, if any, you are taking to enhance production through this means. By the same token, I have a right and need to know of any such activity in the immediate vicinity by you as operator or by other operators to assure me you are or will be taking similar vacuum operations on lands in which I have an interest to prevent drainage.

I therefore respectfully request that you notify me of the commencement of vacuum operations on any gas well in which I have a mineral interest or on adjoining property within a radius of one mile. Please refer this letter to the proper channels and confirm receipt of this letter in writing. If additional information is needed with reference to my royalty interest, please advise.

Very truly yours,
